

Noninvasive Testing Summary

- The quality of the test report will be related to the question/indication that led to the test, quality of the study, and is subject to interobserver variability.
- Mild valve lesions don't cause symptoms.
- Stress tests are most useful for exertional symptoms or evaluation of known disease.
- CCTA utilization is growing rapidly but be cognizant of cumulative radiation exposure.
- Isolated atrial and ventricular ectopy as well as brief SVT is common and usually not a cause for concern.
